## General Information and datasheet (Enzymatic Therapy)

Complete Liver Cleanse

Performing over 500 functions, the liver metabolizes carbohydrates and proteins, synthesizes and stores vitamins, regulates hormones, along with many other things. To do this job, the liver is also required to be exposed to many harmful toxins and chemicals each day. To support the liver through periodic supplementation, the proper balance of herbal ingredients, phytosterols, and fiber is necessary. This balance can be found in Complete Liver Cleanse. This multi-ingredient formula is a convenient way to support overall liver health and detoxification. Among its many ingredients, Complete Liver Cleanse includes: herbal ingredients that support liver and gallbladder health; detoxifying ingredients that keep bound toxins from being reabsorbed; phytosterols to block cholesterol absorption in the intestines; fiber that moves cholesterol and toxins out of the body; oat beta-glucan fiber with up to four times higher viscosity than others; and a simple, two week liver cleanse program. Every three capsules contains thirteen milligrams of calcium, one gram of proprietary PuraFiber Blend, 220 milligrams of Milk Thistle Fruit Phytosome, 100 milligrams of Burdock Root Extract, 100 milligrams of Calcium D-Glucarate, 75 milligrams of Boldo Leaf Extract, 50 milligrams of Turmeric Rhizome Extract, 50 milligrams of Dandelion Root Extract, and 30 milligrams of Artichoke Leaf Extract.

Each day the liver has to process a very large amount of blood at a rate of three pints per minute, while performing over 500 physiological functions including protein and glucose synthesis, carbohydrate metabolism, vitamin and mineral storage, synthesis of clotting factors, urea formation, metabolism of medications, the production of bile, hormonal regulation, blood glucose control, and other regulatory functions. The liver neutralizes harmful substances so that it can be carried to the intestines and kidneys for excretion. Excreting potentially harmful compounds that are generated in the body and acquired through exposure to the environment is known as detoxification. Toxins in the body are generated as by-products of cellular metabolic process and may include dead or digested bacteria, hydrogen peroxide, cellular debris, and carbon dioxide. According to the environmental protection agency, the use of pesticides has doubled the amount of toxins in the air every ten years since 1945. The EPA also has concluded that toxic chemicals can now be found in almost every American.

A major component in Complete Liver Cleanse, milk thistle extract, provides support at a cellular level for healthy liver function. The patented delivery system known as the Phytosome process provides superior absorption of the milk thistle extract. Silymarin, a key component of milk thistle, supports the health of Kupffer cells which are specialized liver cells that are responsible for removing bacteria, old blood cells, and other foreign matter from the liver's blood supply. It also scavenges free radicals produced by activated Kupffer cells, supports healthy leukotriene levels, and supports glutathione production that is used in detoxification. Along with this, silymarin also supports the health of hepatocytes, which are highly versatile liver cells that have unique physiologic functions that are crucial to the liver's detoxification processes.

The special, patented process known as Phytosome, which helps the absorption of milk thistle in Complete Liver Cleanse pairs herbal ingredients with phosphatidylcholine molecules, which is an important building block of cell membranes. When milk thistle is bound with phosphatidylcholine, the phosphatidylcholine molecule facilitates absorption through the intestines into the bloodstream.

Along with the above ingredients, Complete Liver Cleanse contains many other herbal extracts that work synergistically with others to provide the best benefits possible. Dandelion root extract, found in Complete Liver Cleanse, supports healthy bile flow from the gallbladder. Another ingredient is Burdock Root, which was introduced to North America during colonial times. It has long history of traditional use for gastrointestinal support, but it also supports the natural physiologic processes of organs involved in detoxification and elimination, mainly the liver, kidneys, and intestines. Boldo, which is a small evergreen that grows in South America and southern Europe, has a strong free-radical scavenging ability, which is mostly attributed to the catechin and flavonoids content in its leaves. It also relaxes smooth muscle and supports intestinal transit time. Artichoke Leaf

extract specifically supports healthy bile production in the liver and healthy gastrointestinal function in general. Turmeric, a perennial shrub in southern Asia, has a long history as both a food ingredient and of health support. Recently it has been studied for its support of healthy bile secretion and pancreatic and gastric function. Complete Liver Cleanse also contains Calcium d-glucarate to enhance the body's detoxification systems and therefore helping to decrease the portion of active compounds that could be hazardous to the body. Detoxification occurs when substances that are no longer needed or may be harmful to the body are broken down and excreted. Calcium d-glucarate, found in both the human body and some plant sources including broccoli and oranges, prevents enzymes from breaking the important bond between toxins and glucuronic acid, so that the enzymes may be properly secreted. The phytosterol blend that is found in Complete Liver Cleanse can help to minimize the absorption of cholesterol from high-protein food sources, help retain healthy cholesterol levels that are within normal limits, and move bile salt through the digestive system. Fiber also plays a key role in the removal and excretion of intestinal toxins in detoxification. Only those fibers that can effectively bind toxins are successful in eliminating the harmful substances. The best binding, removal, and eliminated effects are found to occur when combining different fiber types, with is exactly what Complete Liver Cleanse does, combining oat beta-glucan and konjac fiber. Dietary fibers are complex mixtures of cellulose, hemicellulose, pectin, mucilage, and gums, which promote laxation and modulate gastric and intestinal physiology. Fiber has been shown in many scientific studies to provide support of gastrointestinal, cardiovascular, immune, and endocrine function health. Oat beta-glucan supports healthy cholesterol levels within normal limits and also supports healthy bile excretion. Konjac, which is rich in glucomannan and polysaccharide, is made into a jelly, noodles, and other foods. It has shown positive results in maintaining healthy cholesterol levels as well as boosting excretion of bile acid. Beyond these benefits, fiber contributes to healthy blood sugar levels. The fibers used in Complete Liver Cleanse have been shown to have four times higher viscosity, or resistance to flow, than others, allowing it to maximize its transit time through the GI tract, and providing a gentle "scrubbing" on the intestinal walls.

Three capsules of Complete Liver Cleanse should be taken both in the morning and at bedtime for fourteen days for the best results. Those who suspect that they have an obstructed bile duct or problematic gallstones should not use it. Also, if you are pregnant, nursing, or taking prescription drugs, you should consult your healthcare practitioner prior to use.

Why cleanse the liver?

Everything we breathe, eat, drink and absorb through our skin is purified and detoxified in the liver.

Environmental toxins and the effects of improper

eating and lifestyle habits can build up in the liver.

It makes sense; toxins have to go!

How does it work?

A unique combination of ingredients stimulate bile flow, which help rid the liver of toxins.†

Once toxins are on the move, you don't want them reabsorbed.

Recommendations: Three UltraCaps™ in the morning and three Ultra Caps at bedtime for 14 days.
